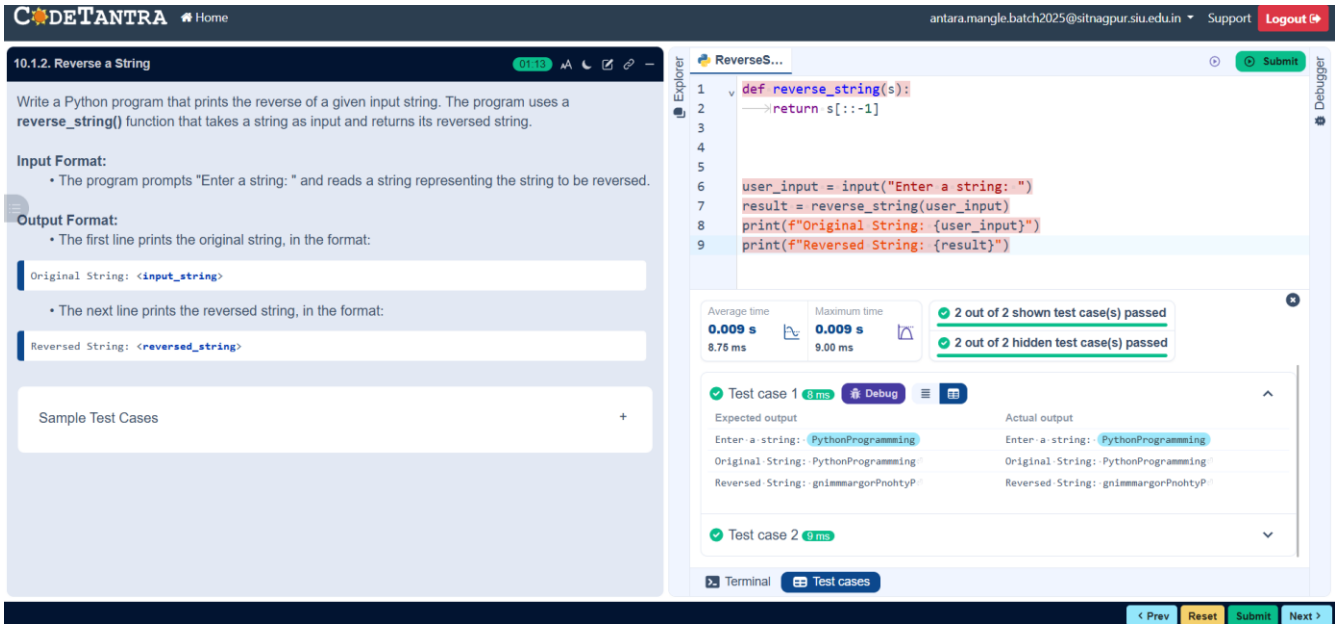
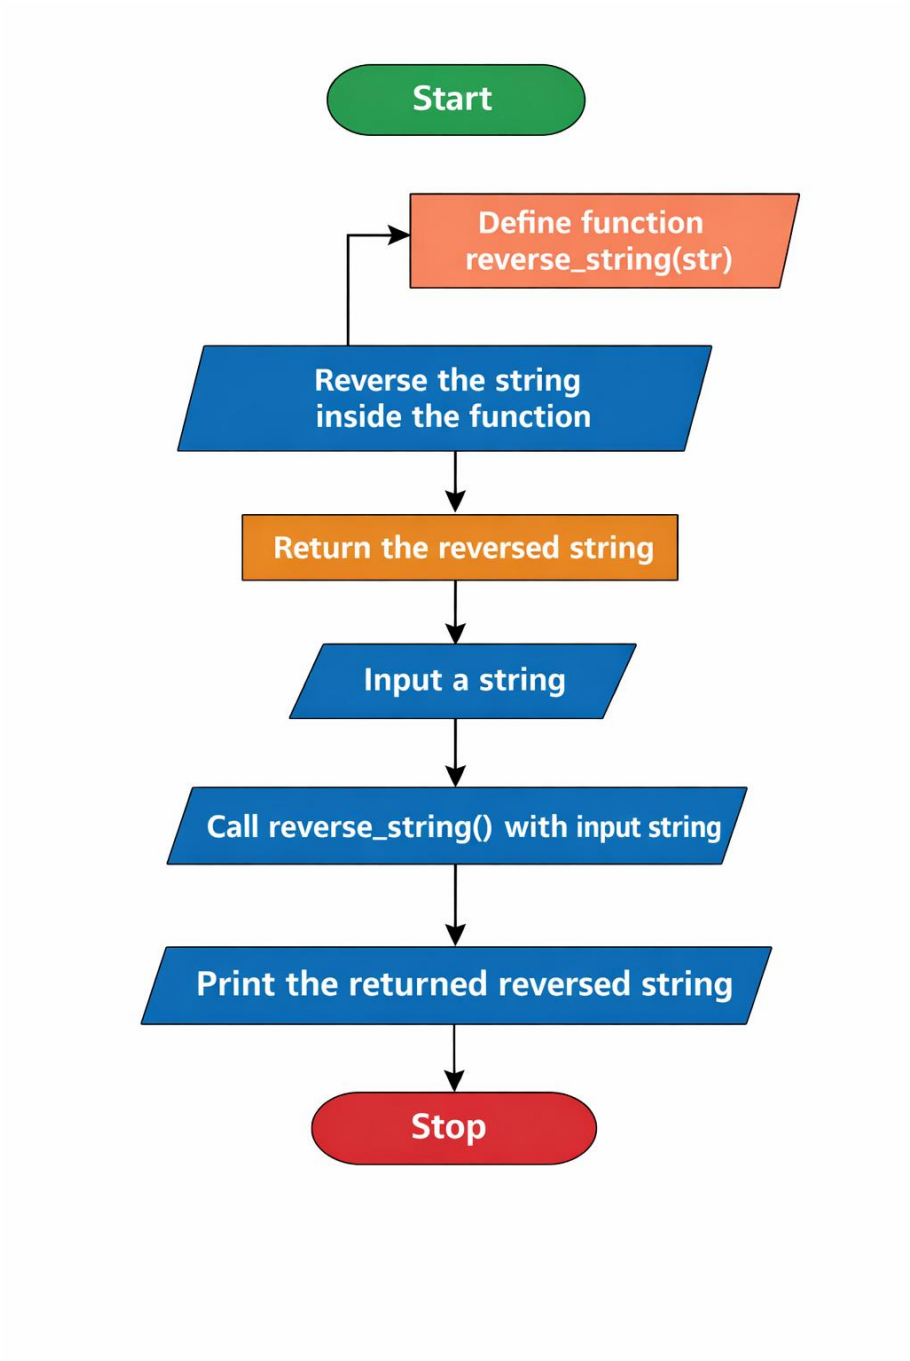
10.2



Algorithm

Step 1: Start
Step 2: Define a function reverse_string(str)
Step 3: Inside the function, reverse the string
Step 4: Return the reversed string
Step 5: Input a string from the user
Step 6: Call the function with the input string
Step 7: Print the returned reversed string
Step 8: Stop

Flowchart



Start
Define function reverse_string(str)
Reverse the string inside the function
Return the reversed string
Input a string
Call reverse_string() with input string
Print the returned reversed string
Stop
