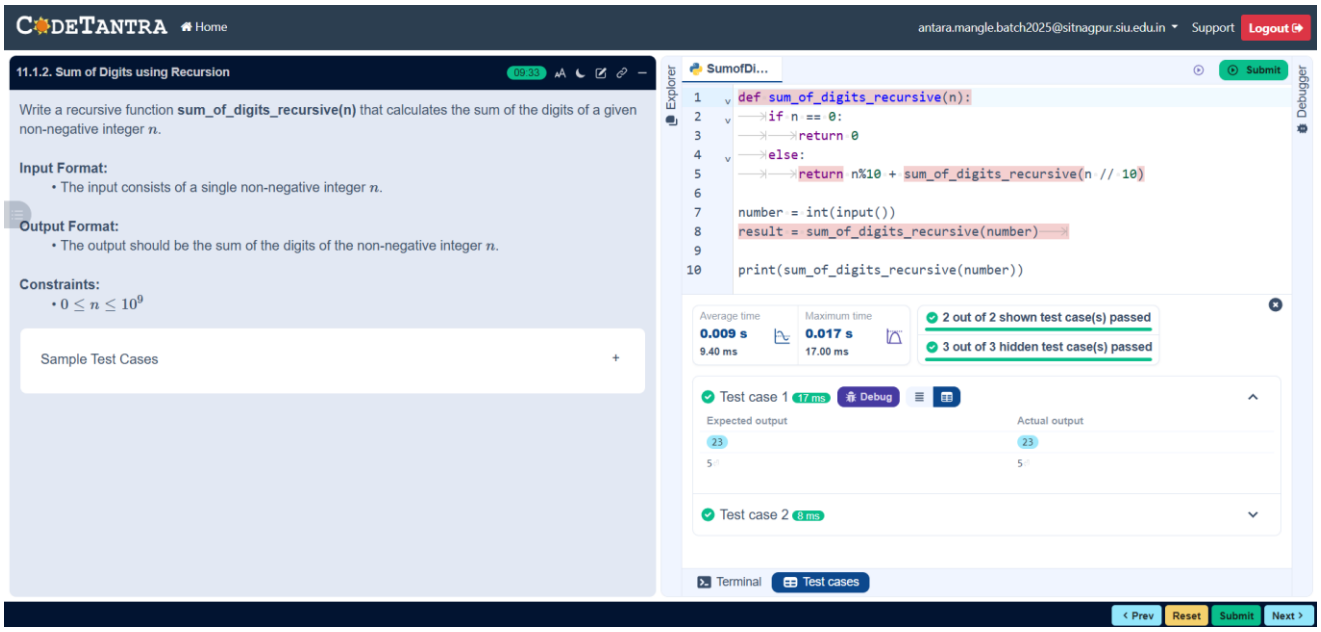
11.2



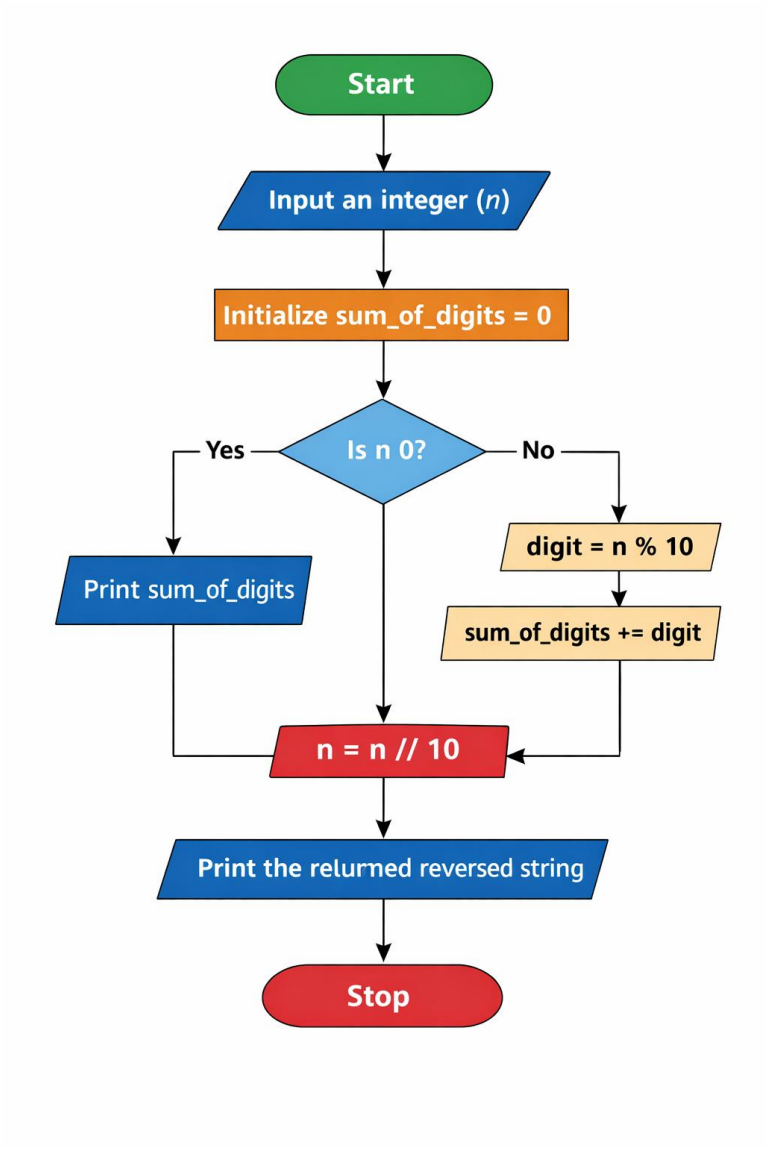
Algorithm

Step 1: Start
Step 2: Input an integer n
Step 3: Initialize sum = 0
Step 4: Repeat while n > 0:

- Find last digit: digit = n % 10
- Add digit to sum: sum = sum + digit
- Remove last digit: n = n // 10

  Step 5: Print sum
  Step 6: Stop

Flowchart



Start
Input an integer (n)
Initialize sum_of_digits = 0
Is n 0?
Yes
No
Print sum_of_digits
digit = n % 10
sum_of_digits += digit
n = n // 10
Print the returned reversed string
Stop
