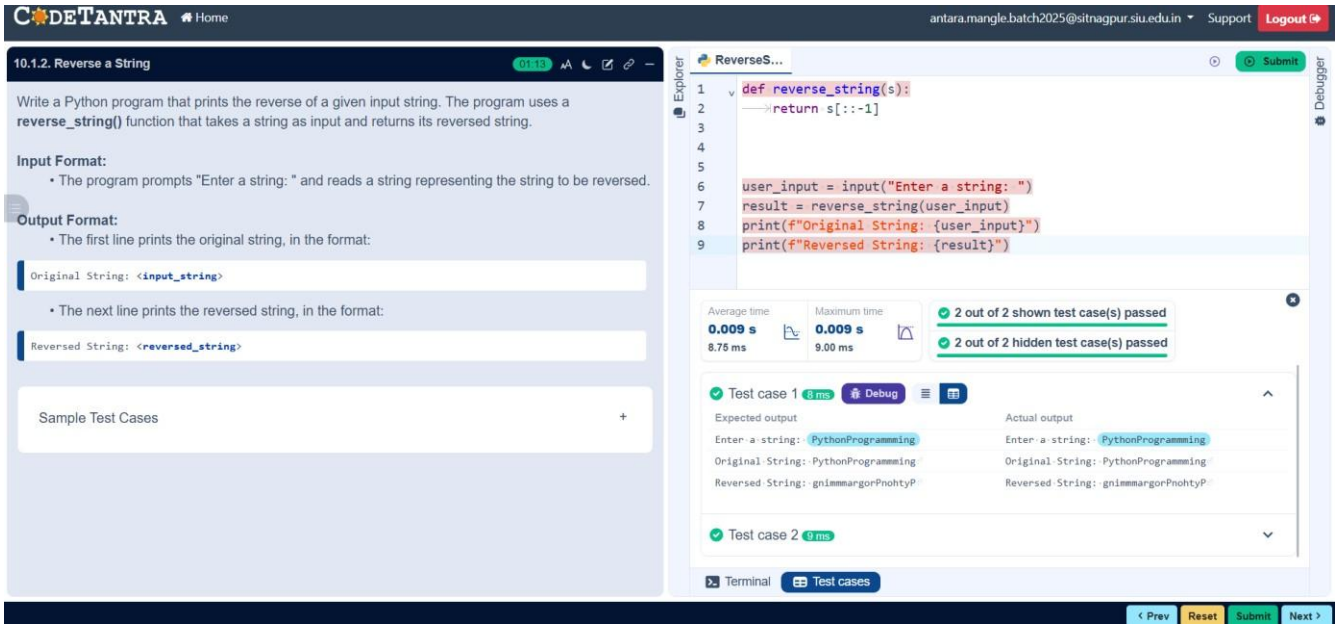
10.2



Algorithm

Step 1 : Start

Step 2 : Input string and store in user_string

Step 3 : Set result as an empty string

Step 4 : Find length of user_string and store in l

Step 5 : Set i = l - 1

Step 6 : Repeat steps while i is greater than or equal to 0

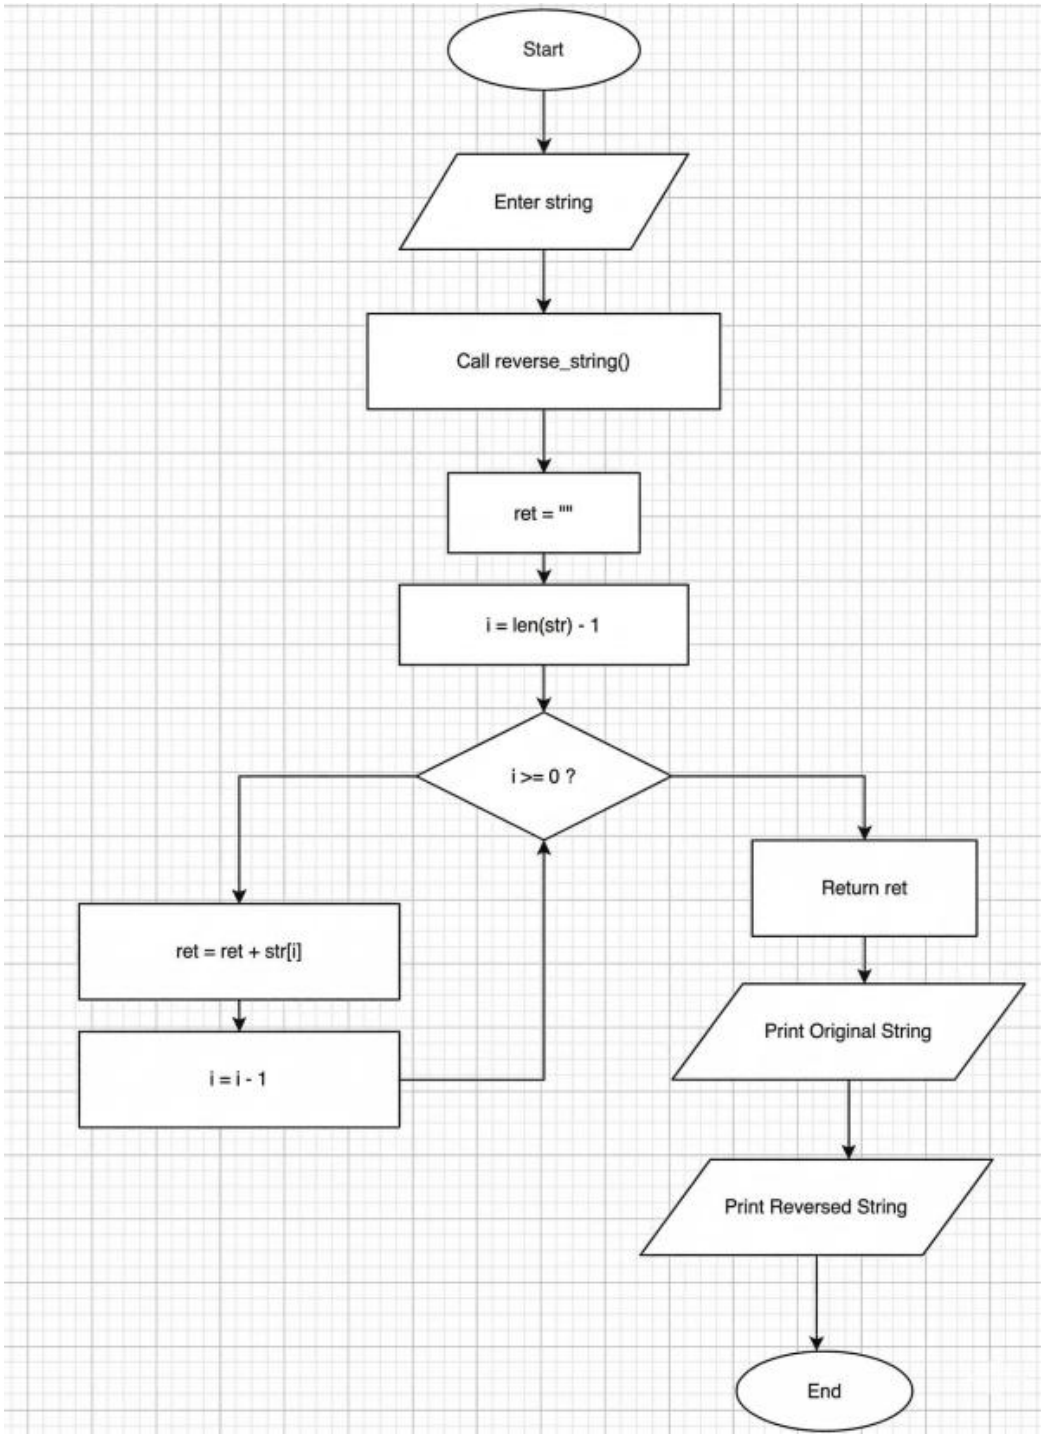
Step 7 : Get the character at index i from user_string

Step 8 : Add the character to result

Step 9 : Decrease i by 1 Step 10 : Go back to Step 6 Step 11 : Print result

Step 12 : Stop

Flowchart



Start
Enter string
Call reverse_string()
ret = ""
i = len(str) - 1
i >= 0 ?
ret = ret + str[i]
i = i - 1
Return ret
Print Original String
Print Reversed String
End
