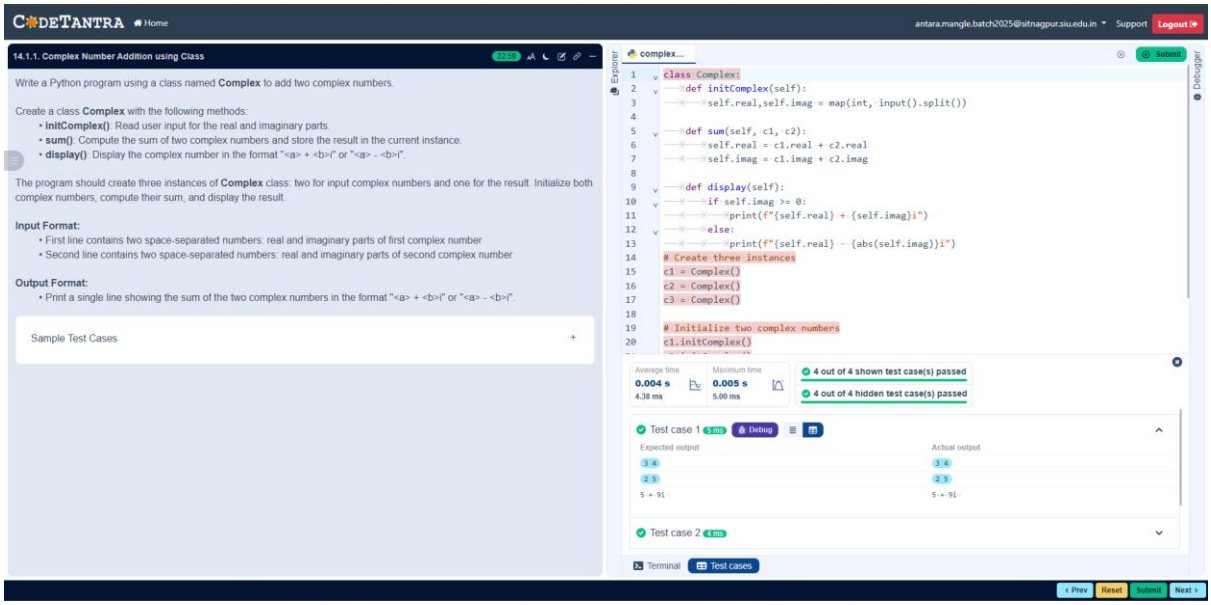
14.1



Algorithm

Step 1: Start

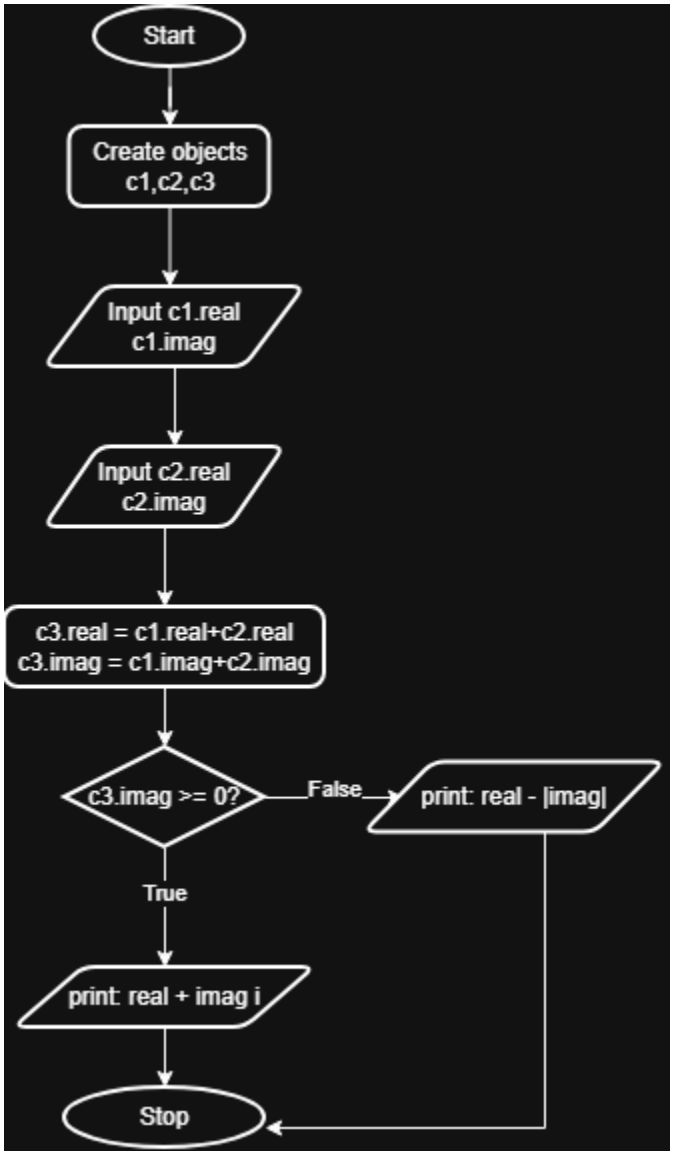
Step 2: Create three objects: c1, c2, c3 of class Complex

Step 3: Input first complex number: Read real and imaginary part Store in c1.real and c1.imag

Step 4: Input second complex number: Read real and imaginary part Store in c2.real and c2.imag

Step 5: Compute sum: c3.real ← c1.real + c2.real c3.imag ← c1.imag + c2.imag

Step 6: Display result: If c3.imag ≥ 0 Print: c3.real + c3.imag i Else Print: c3.real - |c3.imag| i



Start
Create objects
c1,c2,c3
Input c1.real
c1.imag
Input c2.real
c2.imag
c3.real = c1.real+c2.real
c3.imag = c1.imag+c2.imag
c3.imag >= 0?
False
print: real - |imag|
True
print: real + imag i
Stop
